New York Metropolitan City | 8624050732 | mpkatti03@gmail.com | Data Engineer | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## SUMMARY

Data Engineer with experience building distributed ETL pipelines, schema normalization frameworks, and containerized batch processing systems. Passionate about designing scalable data infrastructure and backend systems for production environments.

## EDUCATION

New Jersey Institute of Technology  
Bachelor of Science in Data Science

Cumulative GPA: 3.8 / 4.0  
Graduation Date: May 2025

## WORK EXPERIENCE

**Junior Data Engineer** - Loxo

*September 2025 - Present*

- Engineered distributed ETL data pipelines processing 200K+ records/migration with 99.9% integrity in SQL Server.
- Normalized and mapped 7+ CRM schemas, reducing reconciliation errors by 30%.
- Built idempotent data validation layers enforcing UUID, type, and referential integrity constraints.
- Orchestrated containerized batch data processing workflows in Kubernetes.
- Improved ETL runtime by 20%+ via SQL query optimization and indexing strategies.

**AI/ML Intern** - Reliance Jio

*June 2024 - August 2024*

- Built SQL and Python based data pipelines supporting A/B testing infrastructure, contributing to 18% retention growth.
- Built real-time interactive dashboards in Python, Tableau, and GCP BigQuery, reducing analysis time by 40%.
- Automated experiment metric tracking using SQL queries and batch processing scripts.
- Deployed containerized data services on AWS EC2 using Docker for scalable analytics workloads.

## PROJECTS

**[SteadyBloom](#)** - Data driven Mood Analytics Platform

*FastAPI • React • PostgreSQL (AWS RDS) • Docker • scikit-learn • pandas • matplotlib • TailwindCSS*

- Modeled normalized PostgreSQL schema for time-series event storage on AWS RDS.
- Engineered RESTful data ingestion layer in FastAPI for structured logging and persistence.
- Built batch data transformation pipelines in Python for trend aggregation and reporting.
- Deployed containerized backend services via Docker for scalable processing workloads.
- Built a responsive React + TailwindCSS frontend with real-time charts and task reminders.

**FrenchSpeechSync** – AI-Powered Video Translation Tool

*FastAPI • React • Whisper • gTTS • MoviePy • AWS S3 • Docker*

- Designed asynchronous video processing pipeline for audio extraction, transcription, and subtitle alignment.
- Engineered backend workflow to orchestrate file ingestion, transformation, and storage in AWS S3.
- Implemented Dockerized processing services for scalable media batch workloads.
- Integrated secure object storage using AWS S3 presigned URLs for upload and download automation.

## SKILLS

### • Languages

Python (Pandas, NumPy), SQL, Ruby

### • Data Engineering

ETL/ELT Pipelines, Data Modeling, Schema Design, Data Transformation, Data Validation, Batch Processing, Data Ingestion, Query Optimization

### • Cloud & Infrastructure

AWS (S3, RDS, EC2), Docker, Kubernetes, Distributed Batch Processing
